

The Coverrock™

An Attractive and Easy Solution for Camouflaging 25kV and 50kV Transformers

Comfortably covers transformers up to 36 x 36 x 24 tall

BEFORE

AFTER

Coverrock™ provides a lightweight and attractive covering for power transformers. The unit fits 25kV and 50kV transformers and is easily removed for service.

Coverrock™ is vented for release of heat and the fiberglass construction acts as insulation from the sun preventing excess heat buildup.

Coverrock™ maintains enough heat to prevent the rock form freezing to the ground so it can be moved by one person at any time with ease.

Coverrock™ is easily repaired if damaged. Color can be shaded or changed with quality flat exterior latex paint using a roller, brush or spray.

Rugged as a Rhino!
